

Acme AI Technologies
Role: GenAI Engineer

Company: Acme AI Technologies builds production LLM platforms.

About the role:

We are looking for a GenAI Engineer to design and ship LLM-powered products.

RESPONSIBILITIES:

- Design and ship RAG pipelines and agent workflows
- Build scalable APIs with Python and FastAPI
- Deploy and operate services on GCP and Kubernetes
- Apply system design best practices for distributed systems

REQUIREMENTS:

- 2+ years of professional experience with Python
- Strong hands-on RAG and LLM application development
- Experience with GCP cloud services
- Kubernetes fundamentals and containerized deployments
- Solid system design for distributed systems

PREFERRED / NICE TO HAVE:

- MLOps practices and tooling
- LangGraph or multi-agent orchestration
- Terraform infrastructure as code

EDUCATION:

Bachelor degree in Computer Science or related field.
